# TECHNICAL STANDARDS FOR DECENTRALIZED CLINICAL TRIALS AS A CARE OPTION LEVERAGED WITH HOSPITALS AT HOME

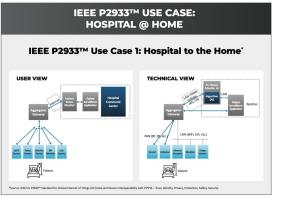

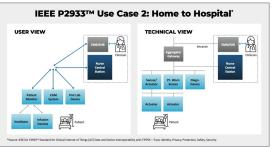

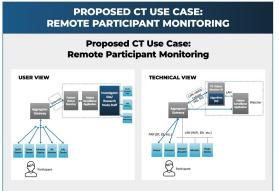

This poster demonstrates an approach to leverage the framework of IEEE P2933\*\*\*. Standard for Clinical Internet of Things (lof) Data and Device Interoperability with TiPPS5 — Trust, Identity, Privacy, Protection, Safety, Security, to enable DCTs as a care option using Hospital at Home and local healthcare providers approaches for remote patient monitoring. Considering the synergies that exists between the standards for IoEE as a process of the providers approaches for remote patient monitoring. Considering the synergies that exists between the standards relative to the providers approaches for remote patient monitoring. Considering the synergies that exists between the standards at Home (IEEE P2933\*\*\*) and the implementation enabled by Digital Health Technologies (IDHTS), IEEE P29682.\*\*) that inclinical includes Technical Recommendation of Posterior Confidering the springles that exist between the standards for IoEE and Home (IEEE P2933\*\*) and the implementation enabled by Digital Health Technologies (IDHTS), IEEE P29682.\*\*) that
